

Drake Delos Reyes

Aspiring Cybersecurity Professional with a strong interest in Red Team operations, Security Engineering, and ethical hacking. Passionate about identifying vulnerabilities, understanding adversarial techniques, and building secure systems that solve real-world security challenges. Self-motivated, adaptable, and committed to continuous learning, with strong analytical thinking, attention to detail, and a problem-solving mindset. Seeking opportunities to contribute to security-focused projects, develop practical cybersecurity skills, and make a meaningful impact by helping organizations strengthen their defenses

Projects

TrvstPulse

TrvstPulse is a phishing detection web application enhanced with an AI-powered system that analyzes links in real time to detect potential phishing attempts and malicious websites. It evaluates URLs and user inputs using intelligent pattern recognition and risk analysis to identify suspicious behavior before users access harmful content. The system is designed to strengthen cybersecurity awareness by providing instant warnings and automated detection of unsafe links, helping protect users from phishing attacks and data theft while improving overall online safety and decision-making.

Haven - Real Estate

Haven Real Estate is a financial and operations-focused system enhanced with an AI chatbot feature to improve user interaction and support. It was designed to streamline business processes by integrating automation and intelligent assistance. The system improved month-end closing efficiency by 25% and increased forecasting accuracy by 18%. It also enabled collaboration across teams, contributing to a 10% increase in revenue. Additionally, automation features reduced manual workload by 30%, while the integrated AI chatbot helped users quickly access information, respond to queries, and improve overall system usability and workflow efficiency

Pterano

Pterano is a B2B SaaS startup focused on providing scalable software solutions for businesses to improve operations, productivity, and digital transformation. It is designed to deliver cloud-based tools that help companies manage workflows, automate processes, and streamline communication between teams and clients. The platform emphasizes efficiency, scalability, and ease of integration, enabling businesses to adopt modern software solutions that support growth and improve overall operational performance

Educational Background

Science Technology Engineering Mathematics

Asian College of Technology(ACT)
2023 - 2025

Bachelor of Science in Information Technology

Cebu Eastern College
2025 - on going

- Specialization in programming

Contact

Mambaling alaska, Cebu City
09564520694
maccogoth@gmail.com

Skills

Technical Skills

- Full-Stack Development
- Backend
- Frontend Development
- Databases
- Pentetration
- UI/UX Design
- System Design
- Programming

Tools

- AntiGravity / vsCode
- Arch linux
- kali linux

Languages

- English
- Tagalog
- Bisaya

Achievements

- Capture the flag champion
- Web Design 1st runner up

Additional Information

- Membership Officer in AWS student builder - CEC
- Co Founder of Pterano - Startup
